“Walking with an aging nervous system: implications from head to toe, and back again”

Presented by:

David J. Clark, ScD
Research Health Scientist
Brain Rehabilitation Research Center
Malcom Randall VA Medical Center, Gainesville, FL
Assistant Professor, Department of Aging and Geriatric Research
University of Florida, College of Medicine, Gainesville, FL

Monday, October 21, 2013, Noon – 1:00 PM
CTRB - Classroom 2161
Lunch Provided

Learning Objectives: At the conclusion of this presentation, participants should be able to:
1. Define automaticity of motor control and describe its benefits, particularly in the context of walking.
2. Describe how the cerebral cortex contributes to walking, and how its contribution can be measured.
3. Recognize how motor and somatosensory impairments can affect walking ability in older adults.
